

## Objectives: Quality Improvement

1. Identify opportunities for improvement within practice (e.g. audits, significant event analysis, practice reports).
2. Describe the sources of data to inform quality improvement measures and activities.
3. Demonstrate an ability to use the Model for Improvement and Practice Improvement Essentials tools and techniques to carry out a quality improvement project.
4. Communicate the results of a quality improvement project to stakeholders.
5. Recognize ethical issues related to quality improvement, including collecting patient data.
6. Demonstrate an ability to work with an interprofessional team to carry out a quality improvement project
